## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 1-3, 5, 8-40 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Barreras '397 (of record).

Barreras discloses a near field antenna comprising inductor 30 and a far field antenna comprising internal antenna 11.

The examiner is interpreting an update command to comprise RF waves from coil 82 which are received by inductor 30.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 4, 6, 7, 39, 40-42 and 46 are rejected under 35 U.S.C. 103(a) as being unpatentable over Barreras '397 (of record).

Regarding claims 4 and 7, one of ordinary skill in the art would have found it obvious to modify the antenna 11 of Barreras to comprise the features of a dipole or a circumferential antenna arrangement because these are two well known antenna configurations.

Regarding claim 6, one of ordinary skill in the art would have found it obvious to incorporate the antenna as part of the therapy lead because the antenna needs to be exposed external of a steel enclosure and the therapy lead readily accepts the antenna without affecting the operability of the lead for stimulation or sensing and the lead must likewise be placed external the steel implantable enclosure.

Regarding claims 40-42 and 46, one of ordinary skill in the art would have found it obvious to provide near and far field acknowledge signals because it is well known in communication protocol to provide such acknowledgement so it can be understood data transmitted was received.

***Allowabl Subject Matter***

Claims 43-45 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Mass et al '045 disclose a far field radio frequency communications link for an implantable device.

Dettloff et al '628 disclose near, mid, and far field characteristic for antenna configurations usable in implantable devices.
